

Joint Seminar

Lille
Neuroscience
& Cognition

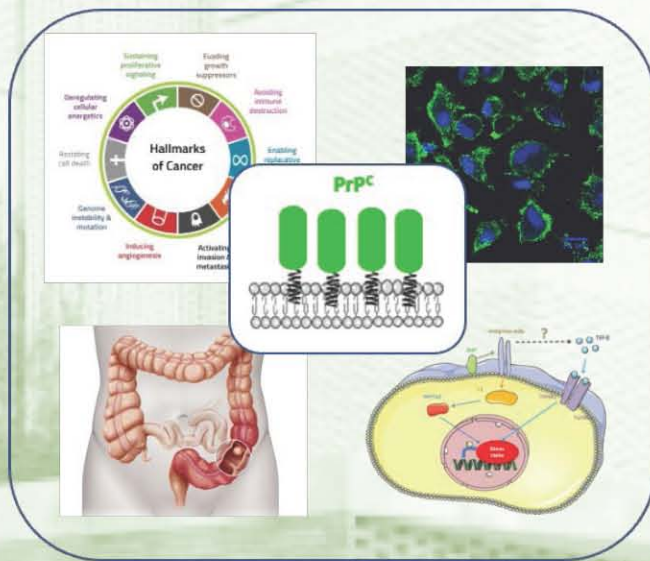

On Thursday the 10th of Oct. 2023 at **11 am**

Sophie Mouillet-Richard, PhD

Centre de Recherche des Cordeliers, Paris

The multifaceted roles of the cellular prion protein: a new player in cancer

Invited by **Sophie Halliez, PhD - LiINCog**

For more than twenty years, my research has focused on the physiological role played by the cellular prion protein PrP^C, with the aim of understanding how disruption of this function under pathological conditions can be detrimental to cellular homeostasis. In particular, I developed cell biology approaches to study the involvement of PrP^C in cell signaling. Subsequently, I started to study the function of PrP^C in stem cells, and thus became interested in the potential contribution of PrP^C to the emergence of cancer stem cells.
